

Melanie Burton
Project Manager

13 June 2017

- Eco-innovation Cumbria is a 4-year programme – 2020
- A collaboration between the three partner Universities
- Aimed at SMEs in Cumbria
- European Regional Development Fund
- Focus on environmental benefit

To help SMEs improve efficiency, grow capacity and develop new solutions for industry

Eco-innovation Cumbria will help SMEs to:

- Identify and create opportunities to supply into the low carbon market
- Increase innovation in low carbon technologies
- Develop products or processes which reduce greenhouse gases

You don't need to be in the low carbon or environmental goods sector to benefit – if you and your business have an idea with an environmental benefit or an environmental challenge we'd like to hear from you

Eco-innovation Cumbria will help SMEs by providing:

- Access to academic expertise and specialist resource
- Knowledge exchange opportunities to encourage companies to develop new products and services
- Increased engagement in Research and Development
- Access to a multi-sector network across Cumbria

SMEs can get involved at any stage:

- Linking with the university partners
- Engaging with experts and other SMEs at a series of events
- Developing a project with a student researcher and academic supervisor

Eco-innovation Cumbria can provide support to a variety of projects including:

- Environmental Technology
- Water
- Renewable Energy
- Waste
- Carbon Management
- Food security
- Energy Storage
- Natural capital
- Micro-energy systems
- Resource efficiency
- District heating schemes
- Fuel cells
- Off-grid production
- Bio-energy
- Life-cycle assessment
- Energy from waste
- Energy efficiency
- Control systems
- Eco-innovation
- Pollution control
- Carbon foot printing
- Climate change

Eco-innovation Cumbria

Please get in touch if you'd like to find out more about...

Looking to increase business efficiency?

Need help with your R&D agenda?

Have a new technology idea?

Eco-innovation Cumbria supports SMEs to improve efficiency, grow capacity and develop new solutions for industry.

A range of short to long term interventions will be delivered by one of the partner universities:

- Attendance at a series of workshops and masterclass events on innovation and product development.
- Access to undergraduate research for short term assignments.
- Access to in-depth, long term researchers working specifically on business led projects.
